

DMS**Improving European Small Scale Mining Efficiency through Digitalisation: The Digital Mine Suite**by **rovjok**

This project aims to promote digitalization and ICT adoption within Polish small-scale mining operations, to improve SME competitiveness and contribute to increased resources efficiency, while helping to drive improved and standardised levels of financial and environmental reporting (Social License to Operate). Standardised Polish regulatory and reporting requirements will be built into the tool, providing the basis for automated financial and environmental reporting by Polish small scale miners. Following incorporation of these key jurisdictional specific elements into the Digital Mine Suite it is envisaged that this tool will then be demonstrated to the wider Polish small scale mining market—where it can be easily scaled to promote wider technology adoption.

Vertical sector addressed

- Mining ICT

Challenges tackled by SMEs

- Social license to operate
- Towards the digital world

Key actions addressed

- KA 1
- KA 3
- KA 5
- KA 7
